C Complementary Summarization Metric

Besides BLEU, we report three complementary metrics that are also used in the CAPYBARA benchmark [2]: *Exact Match (EM)*, *METEOR*, and *ROUGE-L*. As shown in Table 5, Table 6, and Table 7, RETROFIT consistently outperforms all categories of baselines across both the most security-critical stripped binaries and the overall cross-representation averages. On stripped binaries, RETROFIT achieves substantial gains over the best baseline, improving EM by 15.4%, METEOR by 15.2%, and ROUGE-L by 9.4%. On the XRep metric, the improvements remain consistent at 4.9%, 4.3%, and 3.2% for EM, METEOR, and ROUGE-L, respectively. These results confirm RETROFIT's robustness across both cumulative and security-critical performance dimensions.

Table 5: Baseline comparison in binary analysis (EM).

	Dec-Full	Dec-Anon	Dec-Strip	XRep
Oracle	28.01	17.57	4.31	16.63
CFT	23.34	**14.53**	4.49	**14.12**
LwF [30]	21.24	12.01	**4.87**	12.71
PODNet [13]	**23.70**	14.49	3.75	13.98
Co^2L [8]	19.26	10.18	3.56	11.00
ResAdapt [42]	16.22	7.15	2.25	8.54
Ensemble Voting	10.12	2.43	1.12	4.56
Ensemble Averaging	8.81	1.55	0.37	3.58
Weight Averaging [55]	5.98	2.37	0.56	2.97
Ties-Merging [58]	16.39	6.66	0.75	7.93
Task Arithmetic [24]	14.85	6.17	0.75	7.25
AdaMerging [60]	5.96	2.18	0.19	2.77
RETROFIT (Ours)	**23.09**	**15.77**	**5.62**	**14.82**

Table 6: Baseline comparison in binary analysis (METEOR).

	Dec-Full	Dec-Anon	Dec-Strip	XRep
Oracle	0.432	0.295	0.162	0.296
CFT	0.412	0.262	0.157	0.277
